PRECAUTIONS

1. Precautions

For continued protection against risk of fire, replace only with same type and same rating fuse.

CIRCUIT NO.	PARTS NO.	DESCRIPTION
F101, F102	252050	5A ST-6, Primary fuse (120V model)
F101, F102	252057	5A-TL, Primary fuse (120V/220V model)
F103, F104	252076	3.15A-SE-EAK, Primary fuse (220V and 120V/220V model)
F111-F114	252078	5A-SE-EAK, Secondary fuse (120V/220V model)
F121, F122	252045	1A ST-6, Secondary fuse (120V model)
	252070	1A-SE-EAK, Secondary fuse (220V model)
	252062	TLC-1A, Secondary fuse (120V/220V model)

2. Replacing the lamps

This unit used the lamps listed below.

CIRCUIT NO.	PARTS NO.	DESCRIPTION
PL701	210085	PL14V60mA W-2.6, Protection lamp
PL702,	210086	PL14V60mA W-0.9, Speaker lamps
PL703		
PL801,	210092	PL14V150mA, Meter lamps
PL802		
PL901, PL902		

3. Insulation resistance measurement

Connect the insulating-resistance tester between the plug of power supply cable and the terminal GND on the back panel.

Specifications; 500V more than $10M\Omega$

4. Voltage Selector (Rear Panel)

Some models are equipped with a voltage selector to conform with local power supplies.

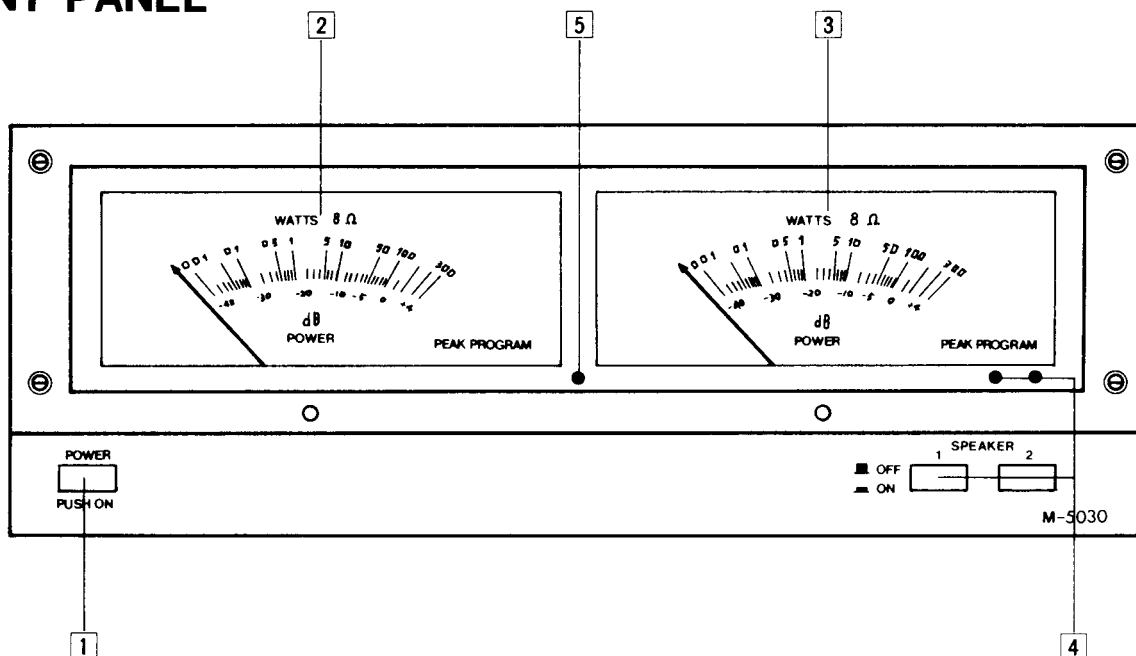

Be sure to set this switch to match the voltage of the power supply in your area before turning the power switch on.

Voltage is changed by sliding the groove in the switch with a screwdriver to the right or left. Confirm that the switch has been moved all the way to the right or left before turning the power switch on.

If there is no voltage selector switch on the unit you have purchased, it can only be used in areas where the power supply voltage is the same as that of the unit.

ADJUSTMENT PROCEDURES

1. Preparations

- a) Place the unit on a level surface, right side up, leaving at least 15 mm of space at the ventilation openings.
- b) There should be no load or signal and the level should be at minimum.
- c) The air should be calm, as moving air can upset the stability of the gauges.

2. Meter zero point

With the power off, align each needle with the 0 mark using the adjustment screw underneath each meter.

Caution: Do not perform this adjustment immediately after turning the power off. Perform after the meter circuit section has discharged.

3. Idling current

Remove the cover and, five minutes after the power has

been turned on, adjust the semi-fixed resistor R441 (R541) so that the voltage between V_{CT-110} on printed circuit board NAMA-1780 is 14 mV.

4. Meter offset

About five minutes after turning power on and with no signal present, adjust the semi-fixed resistor R639 (R640) on the printed circuit board NAME-1717 to align each meter needle with 0.

5. Meter level adjustment

- a) Apply a 1 kHz input signal to the left (right) channel INPUT terminal.
- b) Adjust the input so that the voltage at the speaker output terminal (under no load) is 28.28V (29.03 dBV).
- c) Adjust R611 (R612) so that the meter reads 0dB.

Caution: Item in parentheses are for the right channel.
