

# Sneak Preview of New Flagship Products

Coming August 2005

5/27/05 update

Last update focused on the MC2KW 2,000 watt mono amplifier. Now, lets take a look at the

## ***C1000 Tri-Chassis Preamplifier***

Many would argue the current McIntosh control Centers are the finest instruments of the type. We would not disagree. The new C1000, which is part of the McIntosh advanced products 2KW system, will

*Above: Sr. Electrical Engineer, Roger, with the C1000T (tube) and C1000P (preamplifier) on his work bench.  
Below is a close up of a topless C1000P.*

*Yes, those are tubes you are looking at in the C1000T, visible through a 'window' on the front panel.*

address the needs of the advanced phonographic user as well as set new performance standards. Does anyone need 140 dB of channel separation, the ability to properly drive all headphones or the choice of tube, solid state or both types of preamplification?

*Sr. Software & Sr. Electrical Design Engineer, Chris, working on the C1000C (controller) on his work bench.*
