# FM STATIONS I HAVE RECEIVED

## My FISHER FM-Station Log

■ FISHER tuners are the most sensitive in the world. Both American and foreign broadcasting systems use FISHER tuners for relay and remote pickup applications. The reason — they are the finest obtainable. As an owner of a FISHER tuner or receiver you can find hours of pleasure in locating and enjoying FM stations broadcasting at great distances from your home. This Logging Chart will help you keep a record of these stations and help you find them again easily. For distant reception, optimum results will be obtained by the use of a good antenna system, erected as high as possible on your roof.
